

## **HOSPITAL'S KPI REQUIREMENTS**

- Write an SQL query to find the total number of patients across all hospitals.
- Retrieve the average count of doctors available in each hospital.
- Find the top 3 hospital departments that have the highest number of patients
- Identify the hospital that recorded the highest medical expenses.
- Calculate the average medical expenses per day for each hospital
- Find the patient with the longest stay by calculating the difference between Discharge Date and Admission Date
- Count the total number of patients treated in each city.
- Calculate the average number of days' patients spend in each department.
- Find the department with the least number of patients.
- Group the data by month and calculate the total medical expenses for each month
